

TASK 1

User Story	Problem Num	Description	Can reproduce	Severity
Add User Authentication (ITR1)	1	The 'Remember Me' button does not work to remember a user. It can be reproduced by selecting the button then trying to log on again.	Yes	Medium
Add User Authentication (ITR1)	2	No check for valid emails. There is not a check to see if it is a valid email address or any 2FA. You can use anyone's email.	Yes	Severe
Add User Authentication (ITR1)	3	Incorrect username displays after change. After changing username, the one that used the sign up still appears on Messaging and Search Topic tabs.	Yes	Small
Add User Authentication (ITR1)	4	Displays confusing error messages on wrong credentials or the same email used. It displays a long Error: Firebase: Error (auth/invalid-credential) instead of just 'Wrong username or password'	Yes	Small
Add User Authentication (ITR1)	5	The 'Forgot Password' button does nothing. You click it and it does not work.	Yes	Medium
Add User Authentication (ITR1)	6	Email and username complications. Login prompts for email instead of username, and browsers store username and password instead of email.	Yes	Medium
Add User Authentication (ITR1)	7	No check for the same username or any tag to indicate a unique username. Could be a feature but it's easier if usernames are unique.	Yes	Small
Add User Authentication (ITR1)	8	Profile picture does not change either in the account tab and appwide when the user wants it to.	Yes	Medium

Store User Search History (ITR1)	1	Can store a search without searching it. If you enter something within the search bar, then save the search without actually searching it, it can save, even if the query is unsearchable.	Yes	Medium
Store User Search History (ITR1)	2	Can store duplicate searches. The exact same searched topics can be stored and displayed in the history tab.	Yes	Small
Store User Search History (ITR1)	3	History displays the number of roadmap steps instead of its detail value which is more useful.	Yes	Small

TASK 2

User Story	Number	Smell Type	File(s)	Description	Severity
Add User Authentication (ITR1)	1	Repetition	index.html	File is not connected to general files, and has multiple parts repeated that are present in the general files, such as the dark-mode functionality.	Medium
Add User Authentication (ITR1)	2	Repetition	index.css	File is not connected to the generalUI.css file, repeating colour implementation and others while it being in generalUI.css.	Severe
Add User Authentication (ITR1)	3	Change Preventers	account.html	The implementation of switching tabs makes it so you'd have to read every html file to make the changes consistent across the app.	Small
Add User Authentication (ITR1)	4	Dead Code	account.css	Having footer stylings when the old footer was removed an iteration ago, and the new footer is in generalUI.css, which account.html implements.	Medium
Store User Search History (ITR1)	1	Change Preventers	history.html	The implementation of switching tabs makes it so you'd have to read every html file to make the changes consistent across the app.	Small

Store User Search History (ITR1)	2	Incomplete Code	history.html history.css	Dead space in the final file is caused by the position vectors of buttons not being fixed.	Medium
Store User Search History (ITR1)	3	Repetition	history.html	Firebase is initialized again in the file, and could be initialized by a helper file along with other files.	Small
Store User Search History (ITR1)	4	Incomplete Code	history.html	The share functionality and buttons have been dead and incomplete code that does nothing for several iterations of the file.	Medium
Store User Search History (ITR1)	5	Repetition	history.html	Two different methods currently handling deleting all history.	Small
