

TO DO [ITR1]

- USER STORIES
 - **Done Part Way Incomplete**
 - Each Tab Functionality and menu is functional
 - User Login
 - User Authentication
 - Remember Me and Sign Ups
 - Store recent searches into memory
 - Create History Test for methods on how to solve
 - Display YouTube Video
 - Display google searches
 - Need to limit searches

Meeting Minutes per ITR1

- Feb 3rd: Met for 90 minutes
- Feb 10th: Met for 90 minutes
- Feb 13th: Talked digitally for 45 minutes

Development Tasks Per User Story & Task Assignment

User Story	Development Task	Team Member	Time Allocated	Time Taken
Each Tab Functional	Create General UI		1 day	1 day
Each Tab Functional	Create menu framework	Otokpa Attah Pietro Angiolella	1 day	0.5 days
Each Tab Functional	Streamline tabs and make each tab similar to the UI	Pietro Angiolella	0.5 days	0.5 days
User Authentication	Create Login	Rishab Yadav	1 day	1 day
User Authentication	Create Authentication	Rishab Yadav	2 days	1 day
User Authentication	Create Account list and API Keys	Rishab Yadav	2 days	2 days
Store User History	Make history store in memory	Pietro Angiolella	2 days	3 days
Store User History	Make history display	Pietro Angiolella	2 days	4 days

Display External Sources	Create search function		1 day	1 day
Display External Sources	Create Google searches	Waleed	1 day	1 day
Display External Sources	Create Youtube search	Rishab Yadav	1 day	1 day

Rationale Behind Changes

1. Google Searches

- We decided to add google searches as well as a youtube source for information when searching to further help with roadmaps and the further away from accidental plagiarism.
- The biggest thing is still the Youtube video at this moment in time

2. Search Course Overhaul

- A few changes from search course going from just a course time and professor display to a university specific outline of that course as long as using RateYourProfessor APIs.
- This change is done because of privacy concerns and also this tab is now more useful to the average student who just wants to know what a course is about and who is teaching it without the filler. It is also now more in line with the rest of the site. As well, we added a University bar to the Create Account to expand on this

3. Quiz Generation Changes

- We decided to change a few things about quiz generation, such as now being able to implement different question styles and being able to pick MULTIPLE topics to test on rather than either topic or course
- These changes are due to further thinking about this feature and the usefulness of it. A quality of life feature as we get more experienced using these APIs and more confident.

4. Starring Topics

- In history, you would now be able to start topics and pin them to the history to easily return to.
- This is a quality of life feature we thought of adding just after the ITR0 deadline ended.

5. Share Feature

- A link system to share topics and courses and quizzes to friends for them to see and try.
- This change was implemented to preserve the group feel of studying and to stay tighter to our goal of a better study tool for ALL students.

Concerns With Project Going Forward

Some concerns with the project currently

- API keys being public or mismatching
 - We need to find a way to have secure keys while being able to share the project
 - As well we need to find where API keys go out of date or are mismatching
- Account system
 - We need to find a way to tie history and topics to a specific account rather than the memory
- GPT-API
 - We must become familiar quickly on how to use this new API and how to integrate it
